PROFESSIONAL SUMMARY

Digital transformation and AI automation leader with healthcare operations experience building automation functions, scaling teams, and modernizing manual workflows. Combines consultant-level discovery, roadmap thinking, stakeholder management, and hands-on ability to build code, implement solutions, and drive adoption.

90%	\$26M	\$6.8M	15+	600+
inventory reduction	delivered vs target	consultant-led savings	opportunity portfolio	employees represented

EXPERIENCE

Elevance Health, formerly Anthem Inc.

AI and Automation Consultant | November 2024 to Present

- Created a new AI and automation consulting function to identify, prioritize, document, and deliver automation opportunities across healthcare operations.
- Supported automation consulting needs for leaders and operational groups representing 600+ employees.
- Managed a 15+ opportunity automation portfolio and maintained quarterly automation roadmaps throughout consultant tenure.
- Authored a healthcare operations automation consulting playbook defining intake, discovery, value calculation, prioritization, LOE templates, governance gates, launch readiness, retrospectives, and continuous improvement standards.
- Created executive-ready automation business cases and LOE documents with scope, phased delivery timelines, ROI, risks, success criteria, capacity lift, SLA recovery, and post-automation efficiency gains.
- Delivered \$6.8M in consultant-led savings across two program years, including \$1.5M in year one and \$5.3M in year two.

Manager, Payment Integrity | November 2023 to November 2024

- Built and scaled a new Payment Integrity team, hiring more than 95 percent of staff.
- Reduced operational inventory by 90 percent through AI-enabled automation, process redesign, and disciplined execution.
- Delivered \$26M across two years against \$20M in combined targets.

Software Engineer | Dates available on request

- Built internal tools using .NET, C#, SQL, and Python to automate claims operations, ETL recovery, system diagnostics, and operational reporting.
- Developed automation and monitoring tools that reduced processing time, improved issue visibility, and decreased downtime.
- Used SQL, Python, and C# to investigate system issues, recover failed processing, and streamline repeatable technical operations.

System Analyst | Dates available on request

- Supported SDLC delivery across analysis, design, troubleshooting, testing, and production support for healthcare technology workflows.
- Translated operational and system issues into technical requirements, diagnostics, recovery steps, and automation opportunities.
- Partnered with business and technical teams to improve claims workflow visibility, issue resolution, and repeatable support processes.

EDUCATION AND CERTIFICATIONS

Aspen University, M.S. in Information Systems, specialization in Enterprise Application Development | ECPI University, Bachelor in Computer Science | ECPI University, Associate Degree in Cyber and Network Security
Certified UiPath Developer | Decisions Certification
